Computer and Internet requirements: The application requires a platform running Microsoft Windows 10. A: In a world that's full of architects and engineers who have come to know how to use Autodesk MEP, I'd think TrussSolver would be too "low-tech" for you. There's a very simple reason: MEP is 1/100th as complicated as what you're asking it to do. Check out my answer here. Basically, you can configure MEP to behave exactly like a spreadsheet, but with many more capabilities: you can use a design database to define your trusses, export cross-sections, and then immediately solve them with the built-in "force" solutions or by using a 4th-party solver. It's a very comprehensive yet easy-to-use solution, and a product that Autodesk actively develops and maintains. While not a "gadget", MEP is a product you can build your entire project in, with ease. If you want a cheaper and easier solution, check out this video: An in-browser, drag-and-drop truss design solution for architects. // Copyright 2012-present Oliver Eilhard.
